# LIMINAL TERRITORIES.

*curated by FILIPPO LORENZIN*

pal project presents the group exhibition *Liminal Territories*, from October 5 until November 20, confronting the public with new trends in digital art. Conceived by the curator Filippo Lorenzin, it brings together 15 international artists working on the interaction between art and new technologies. The exhibition will be accompanied by a publication, the pal mag #04 (a bilingual magazine edited on the occasion of each exhibition).

The exhibition *Liminal Territories* proposes a new perspective on the current trends in digital art by addressing the broader historical and artistic contexts that allow us to look at GIFs and 3D scans as works of art. The influence exerted by so-called traditional art history on contemporary artists working with digital tools has been explored taking in consideration not only stylistic features but also socio-political changes that still shape the way we consider and enjoy art and culture at large. The exhibition is an opportunity to learn about the art practice of contemporary creatives who use cutting-edge technology such as 3D printing, AI-generative processes and digital modelling to explore reality in ways that, to various degrees, pay homage to art styles and movements of the past. By investigating the distinct creative approaches of a group of selected international artists, the exhibition offer a public used to enjoying traditional art works a chance to learn about the most interesting contemporary trends in art.

CURATOR:

Filippo Lorenzin is an art writer, teacher and curator of MoCDA - Museum of Contemporary Digital Art. He has over 10 years experience in the fields of contemporary art and digital culture collaborating with international venues, including Goethe Institut, Paris College of Art and Arebyte. His research aims at developing a critical approach towards new media offering an oblique perspective on contemporary art and culture trends.
